

CONTENTS OF THE TWIST B PANIC BAR PACKAGE

position	pcs.	description	position	pcs.	description
1, 2	01	Twist/Exus mechanism assembly	12, 12a	01	9x9x38mm square spindle with hole to pass and M5x50mm Philips-head countersunk screw
3, 4, 5	01	Twist/Exus LP carter set with plugs	13	02	Black cap hole Ø8,8mm
6	01	Twist set carrier arms	14	04	Pan head self tapping screw Ø4,8x16mm
7	02	M5x10mm hex socket countersunk screw	15	04	Toothed washer
8	01	S3 hex key	-	01	A034 hole-drilling template
9	01	Adhesive pictogram (green arrow)	-	01	Twist B Proget panic bar installation instructions
10	01	Horizontal bar in anodized aluminium			
11	01	S2 hex key			

 Please note that article 4 of the MD of 03 November 2004 obliges the installer to write up, sign and provide the owner of the activity with a declaration of proper installation that makes explicit reference to the instructions supplied by the exit device manufacturer.

 - The panic lock (17) and the respective strike box (counterstrike) (18) are delivered already mounted on the door!

TOOLS REQUIRED

Medium-sized Philips-head screwdriver or electric screwdriver, electric drill with Ø3mm drill bit for steel, fine-toothed hack-saw and hack-saw for aluminium.

IMPORTANT

- Installation should be carried out by qualified personnel only and in strict conformity with the instructions supplied.
- For a correct installation all supplied components must be used, including toothed washers.
-  - No variations are allowed, and only components indicated in the package contents may be used.
- Given its purpose, the Twist B panic bar should be mounted on the push-side of the door.
- Before proceeding with installation, check the package contents to ensure that no pieces are missing.
- Check if the door is equipped with the panic safe lock.
- Any different installation configuration from that illustrated on pag. 2/4 is not allowed.

INSTALLATION

-  - Insert the M5x50mm screw (12a) into the countersunk hole of the square spindle (12) and fasten it at the threaded insert (17a) of the panic safe lock (17) by tightening well the screw.
- Use the template to drill the holes (16) with the Ø3mm drill bit, checking the level. If holes are already present, drill them again for the internal reinforcement.
- Apply the operating mechanism (1) to the lock side (push-side of the door) and centre the square spindle (12) correctly. Fix the mechanism (1) at the leaf by fastening the Ø4,8x16mm self-tapping screws (14) and their toothed washers (15).
- Fix the square spindle (12) at the operating mechanism (1), using the S2 hex wrench (11).
- Fasten the mechanism (2) of the panic bar at hinged side, using the self-tapping screws Ø4,8x16mm (14) and their toothed washers (15).
- Put the plastic carter with "EXIT" wording (3) on the operating mechanism (1) and the other one (4) on the hinged side mechanism (2), snapping them on manually.
- Apply the carrier arms (6) and fasten them with the dedicated screws (7), tightening them securely with the included S3 wrench (8).
- Make a precise "L" measurement, cut the aluminium bar (10) adding 19mm and remove the burrs from the cut edge. Remove one carrier arm, attach the bar and re-fasten the entire assembly.
- Apply the plugs (5).
- Insert the two caps (13) in the open holes of the panic safe lock (17).
-  - Push the Twist B panic bar at any point along the horizontal bar, checking to ensure that the latch bolt opens easily and fully. Test the door in opened and closed position and if necessary file down the plastic strike box (18) of one-leaved doors or the panic safe lock for inactive leaf of two-leaved doors.
- Apply the pictogram (9) with the green arrow on the internal surface of the door, just above the horizontal bar.
-  - Lastly, use a dynamometer to measure the force required on the horizontal bar to release the lock. Record this force measurement in the present document.

USE

- Ensure that the door always opens easily.
- Avoid unnecessary strains on or handling of the exit bar.
- Protect the panic bar from external atmospheric agents.
- Avoid anything that could hamper the free movement of the bar.
- Do not paint the lock.
- Use the bar properly, do not pull it in the wrong direction.
-  - Make sure that any damaged or malfunctioning parts are replaced immediately.

MAINTENANCE

To ensure that door usage conforms with regulations, the following maintenance checks should be carried out at least once a month:

- Confirm that all of the installed components correspond with those listed in the present instructions and that no other latching devices than those originally installed have been added to the door.
- Inspect and activate the panic bar to verify that all of its components are in satisfactory operational condition.
- Use a dynamometer to confirm that the release force shows no significant differences from the forces recorded at the time of installation.
-  - Check whether all screws are fully tightened, tightening any that may have loosened.
- Check whether exit bar can be moved with minimal effort, and that the latch bolt retreats from the strike box without offering resistance. If the door has become difficult to open due to friction, the resistance can be reduced by filing the strike box down to the appropriate height.
- Activate the Twist B panic bar at both ends of the horizontal bar, checking to ensure full retraction of the latch bolt in both cases.
- Ensure that the latch bolt exits completely when the horizontal bar is released.
- Check the horizontal bar and replace it if any damage or deformities are detected.
-  - Check whether the inserts and strike boxes are blocked in any way and eliminate any obstructions.
- This product requires no special maintenance. Grease spray should be used to lubricate the internal workings of the lock and panic bar on a regular basis
 - the latter has a hole on its carter for this purpose, located below the carrier arms.
- For normal cleaning use mild detergents.

-  - Any adjustments that become necessary must be carried out by qualified personnel using original NINZ replacement parts.
-  - The owner of the activity is responsible for keeping the declaration of correct installation on file, conducting proper exit bar maintenance in accordance with all of the manufacturer's maintenance guidelines, keeping maintenance and check-up records and preserving the present document.

ATTESTATO DI CONFORMITÀ DIRETTIVA 89/106/CEE		CE 0425
CERTIFICATE OF CONFORMITY DIRECTIVE 89/106/CEE		
<small>Questo certificato è rilasciato in conformità a quanto prescritto dall'Art.6 par.2 lettera b) del DPR 21 aprile 1993, n°246 (Direttiva 89/106/CEE) ed attesta la conformità del prodotto di seguito identificato agli Art.1, Art.2 ed allegato A del DPR 21 aprile 1993, n°246 (Direttiva 89/106/CEE). This certificate has been issued in conformity to what prescribed by the Art.6 par.2 letter b) of the DPR 21/04/1993, n°246 (Directive 89/106/CEE) and certifies the conformity of the product described below to the Art.1, Art.2 and attachment A of DPR 21/04/1993, n°246 (Directive 89/106/CEE).</small>

Certified components for TWIST B

Panic exit device: serie "TWIST"

Panic safe lock: art. AP 16/18

Lock strike box: art. 2401006

External control: art. B

 FOR REPLACEMENTS USE ORIGINAL NINZ REPLACEMENT PARTS FROM ITS FULL CERTIFIED SYSTEM ONLY!

PROPER DISASSEMBLY

When some parts or all of the panic bar needs to be replaced, the general guideline is to reverse the order of the original installation instructions. To replace the lock, all parts of the panic bar in the locking device zone must be disassembled. The lock itself (17) can be removed by unscrewing the two frontal screws.

 This operation should be carried out with great care in order not to damage or move the components located inside lock housing!

MAINTENANCE RECORD			
date	description of the intervention	release force checked	operator

 These instructions should be given to the owner of the activity, who must preserve them as a record of the maintenance operations carried out on the panic bar.
